Professional Summary

QA engineer with 5+ years building automation frameworks from zero across engineering simulation, SaaS, and core banking domains. Currently driving E2E automation for ANZ's banking platform at Infosys, where I introduced LLM-assisted test optimization and built a Playwright + BDD framework covering 150+ critical workflows. Looking for an SDET role where framework design, CI/CD integration, and quality strategy are first-class concerns.

Professional Experience

Quality Engineering Analyst | Infosys (Client: ANZ)

Nov 2024 - Present

- Designed and built a Playwright with Cucumber BDD framework from scratch for ANZ's core banking platform, covering 150+ critical user journeys across payments, transfers, and loan processing.
- Drove automation coverage from **45% to 87%** over 9 months by prioritizing high-risk scenarios and establishing a shared component library that reduced new test development time significantly
- Integrated the regression suite into Codefresh CI pipelines so every commit triggers a run, shrinking the feedback loop from next-day batch runs to same-day validation and catching regressions before they reach UAT.
- Pioneered LLM-assisted test case review to audit and consolidate a 400-case legacy suite, eliminating duplicate coverage and refocusing automation effort on genuinely high-risk workflows. This is now used as a team practice.
- Led release quality reviews with product stakeholders: presented defect trend analysis, coverage gap reports, and risk assessments that directly informed go/no-go decisions for two major releases.
- Mentored a junior QA engineer on framework design principles and code review practices, which they now independently own and extend a dedicated test module.

Member Technical Staff | QA, Zoho Corporation

Mar 2024 - Oct 2024 (8 months)

- Maintained zero critical defect escapes across 6 consecutive releases of Trident (Emails, Chats, Notes, ToDo) by running structured Sanity, Smoke, Regression, and UAT cycles each sprint.
- Introduced standardised test case templates and naming conventions that cut case creation time by $\sim 35\%$ and made cross-team test discovery significantly easier; previously, tests were scattered across personal folders.
- Used Zoho Apptics for real-time production monitoring, identifying 5 UX regressions post-release that were not caught by automated checks.
- Served as primary QA escalation contact for customer-reported issues: triaged, reproduced, and coordinated fixes for 30+ high-priority tickets within a 24-hour SLA.

Test Engineer | Modelon AB

Aug 2020 - Feb 2024 (3.5 years)

- Built Modelon's first automation suite from zero: Cypress for web workflows and Selenium + Cucumber for the legacy application, reaching 60% automation coverage in 18 months and cutting regression cycles from 5 days to 2.
- Designed 300+ automated test cases for complex engineering workflows (thermodynamic model simulation, parameter optimization, results visualization) with Jenkins integration — reducing manual regression effort from 80 hours to 30 hours per release.
- Built 80+ API test suites using Karate and Postman, including contract tests that caught 23 breaking API changes before they reached production.
- Implemented Page Object Model across the Selenium framework, reducing test development time by $\sim 40\%$ and making onboarding new test engineers significantly faster.
- Presented testing strategy and release quality metrics to 50+ stakeholders across engineering and product, including live demos for Fortune 500 clients in collaboration with the Stockholm dev team.

Technical Skills

Automation: Playwright, Cypress, Selenium WebDriver, Cucumber/BDD

Programming: JavaScript, TypeScript

API Testing: Postman, Axios, Karate

CI/CD and Version control: Jenkins, Codefresh, Git, SVN

Testing Methodologies: E2E, API, Regression, Smoke, Sanity, UAT, Integration, Cross-browser

Domain: Core Banking / BFSI (ANZ), Engineering Simulation (Modelon), SaaS (Zoho)

Technical Projects

Banking Workflow E2E Automation Suite | *Playwright, JavaScript, POM*

- Comprehensive end-to-end testing framework for banking applications covering critical workflows. Implements Page Object Model design pattern, parallel execution across 4 browsers, and reporting with test reliability. [Refer GitHub](#)

RESTful API Test Automation Framework | *Axios, JavaScript, Mocha/Chai*

- Lightweight API testing framework for RESTful services featuring HTTP request automation, response validation, schema verification, and comprehensive error handling. Demonstrates GET/POST/PUT/DELETE operations, authentication flows, and data-driven testing. [Refer GitHub](#)

E-Commerce Test Framework | *Cypress, JavaScript*

- Advanced Cypress automation framework for e-commerce workflows featuring custom commands, fixtures for test data management, and data-driven testing with different test data integration. Covers end-to-end shopping flows with comprehensive assertions, screenshot capture, and video recording. [Refer GitHub](#)

E-commerce Showcase Website | *HTML, CSS, JavaScript, Netlify*

- Built a responsive static website for a fashion/embroidery brand with a focus on clean UI and user experience. Implemented SEO-friendly URLs and structured multi-page navigation. Deployed on Netlify with optimized assets for improved load performance. [Refer GitHub](#) | [Live site](#)

Awards & Recognition

- **Insta Award for Innovation (Q4 2025)** - Infosys: Recognised for an AI-powered test optimisation framework that reduced manual QA effort by 30 hours/sprint on the ANZ banking platform.
- **Diploma of Innovation (2022)** - Modelon AB: Awarded for architecting the Cypress automation framework — 0% to 60% coverage, regression cut from 5 days to 2.
- **Diploma of Engagement (2022)** - Modelon AB: Recognised for cross-functional collaboration with the Stockholm dev team, preventing 20+ design-level defects and delivering client demos.

Certificates

- ISTQB Foundation level - CTFL-111668
- Selenium WebDriver JS Automation
- Software Testing Foundations
- Learning Jira (Cloud Edition)
- Test Automation Foundations
